4. Flood Sensor (FS-433):

- Detects presence of water or increase in water levels
- Useful in detecting overflows when placed close to washing machines, water heater, sump, etc.
- Sends signal to control panel or dialer when water is detected
- 12 volt alkaline battery included

5. Keypad Control (KP-433):

- Can be used as an external keypad or a secondary unit to operate the alarm system
- Lighted keypad with Panic, Night, Day and Away features
- Long life lithium battery included
- Low battery indicator

6. Magnetic Switch (MS-001):

- It is used in conjunction with the door/window sensor
- An add on for additional doors and windows

7. Motion Sensor (PS-434A):

- Suitable for indoor & outdoor
- Monitors the area in a 110 degree arc and for up to 40 feet away from the sensor
- Can be added to any Skylink Security System
- 9 volt alkaline battery included

8. Panic Transmitter (PT-434):

- This waterproof transmitter can be worn around the neck or carried as a key chain. Very useful for elderly, disabled, handicapped, etc.
- Sends signal to dialer at the push of a button
- Long life lithium battery included

9. Smoke Sensor (SS-433):

- Detects sound frequency of all existing smoke and CO alarms
- Sends signal to control panel or dialer when the preset sound frequency is detected
- 9 volt alkaline battery included

10. Silent Alarm (SW-433):

- Unit plugs into an electrical outlet, plug a lamp into the unit
- Unit flashes light when alarm is triggered to notify your neighbours, etc., Very useful for the hearing impaired

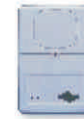

11. Temperature Monitor (TS-434):

- Used for monitoring temperature of a specific area, for example, greenhouse, storage, etc.
- Sounds and transmits signal at fluctuations in pre-set temperature
- Can be preset between 0°F(-19°C) to 150°F(69°C)
- Long life lithium battery included

12. Vibration Sensor (VS-433):

- Detects vibrations and transmits signal to control panel or the emergency dialer
- Very effective to use on Rv's, boats, safes, jewelry, etc.
- 9 volt alkaline battery included

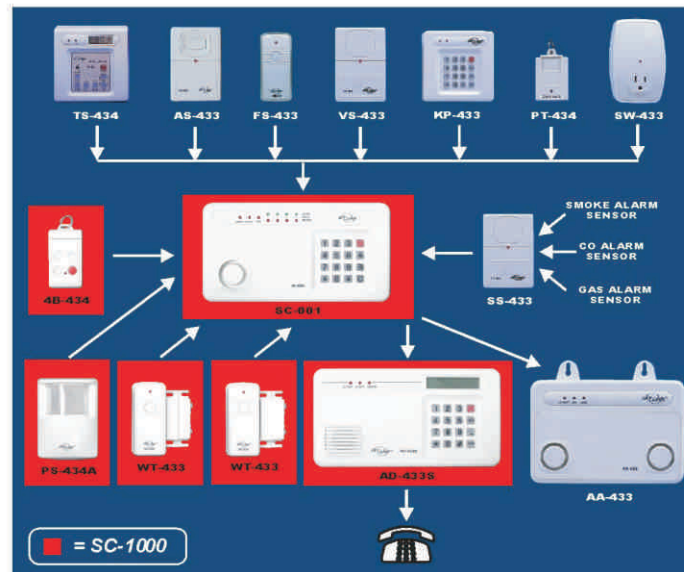

13. Door/Window Sensor (WT-433):

- Can be attached to any door or window
- Any number of magnetic contacts can be added
- 12 volt alkaline battery is included

14. Key chain Transmitter (Remote) (4B-434)

- Convenient and compact key chain size remote to operate the alarm system remotely
- Panic button to instantly activate alarm if needed
- 12 volt alkaline battery included

SC-1000

The Complete
Wireless Alarm System

What is SC-1000?

SC-1000 is a totally wireless alarm system that is easy to install, program and use.

How is it different from other alarm systems that are presently in the market?

SC-1000 is a complete alarm system that applies the latest rolling code technology making it invincible to code grabbers. The emergency phone dialer is a separate unit which can be installed away from the control panel so that it can dial out discreetly in the event of an emergency. This is a unique feature. Most dialers on the market are integrated in the control panel. It cannot dial out when the control panel is vandalized by a burglar.

What is rolling code technology?

Every time you press your remote transmitter to turn the security system on or off, a code is generated which is recognized by the receiver that in turn performs the function. With most security systems there is only one assigned code. Whenever the remote is pressed, it generates the same code making it vulnerable to code grabbers, who use electronic scanners to steal the code. With rolling code technology, each time the remote is used, it generates a different code which can only be recognized by a rolling code receiver. So even if an electronic scanner picks up the code, the next code will not be the same. The receiver will not recognize the code if the code grabber tries to use the old code. This technology makes the system very safe and secure. That is why so many people rely on Skylink when it comes to security.

How much is the monthly monitoring fee?

None. The best part about owning the SC-1000 is that it is a self monitoring center on its own. The SC-1000 comes with an emergency phone dialer which in the event of an emergency will call up to 9 different numbers, and sends your personal (up to 40 second long) recorded message to the person of your choice. Thus, eliminating the need for a monitoring company.

How hard is it to install, program and use the SC-1000?

At Skylink, we make sure that all our products are most user friendly. The result is that the SC-1000 is a totally DIY wireless system that does not need any hard wiring whatsoever. It comes pre-programmed at the factory so that you can just hook it up and start using it. You can always personalize the functions if there is a need by going through the clear and simple instructions in the user manual.

The following are the accessories that can be added to the SC-1000 to customize your personal monitoring center.

1. Audio Alarm (AA-433):

- Can be used as a main alarm or as an accessory to be placed in remote locations
- Water resistant, can be installed outside the house
- A/C powered with a 9v battery for back up.
- Sounds a loud 120dB sound when triggered
- Excellent for attracting attention when needed

2. Emergency Dialer (AD-433S):

- Records your personal message up to 40 seconds long
- Calls up to 9 numbers of your choice, both pagers and phones
- Repeats your emergency message up to 9 times
- Self monitoring device, no monitoring cost to you
- Uses the latest Rolling Code Technology for added security and confidentiality of your personal codes
- Panic transmitter instantly activates the dialer with the push of a button
- Works with all the different sensors of the SC-1000
- Activates automatically when any of the sensors are triggered
- Universal dial tone, works with all phone systems
- Works with AC power with a backup alkaline battery in case of power failures.
- Very easy to install, program and use

3. Audio Sensor (AS-433):

- Detects the sound of the existing alarm system and sends a signal to the emergency phone dialer
- Eliminates the need for monitoring service
- 9 volt alkaline battery included
